

9kg Series 9 Heat Pump Dryer

Better energy efficiency and fabric care with heat pump condensing technology, which dries your clothes at a lower temperature.

- 18 dry cycles, including 5 extra care cycles
- 8 Star Energy Rating
- Auto-sensing detects moisture levels to prevent under or over drying
- No need for external venting, allowing your dryer to be placed anywhere in your home

DIMENSIONS

Height	850 mm
Width	600 mm
Depth	670 mm

Refer to install guide for further specifications

FEATURES & BENEFITS

18 Fabric Care Cycles
Intuitive controls with clever drying hints help you get the best results. Easy to use, the LCD display provides a simple interface to select from 18 dry cycles; including Ultra-delicate for lace; Outdoor for high performance fabrics; a Warm-up cycle for towels; Jeans for everyday essentials; and Soft Toys for those special items.

Heat Pump Technology
Heat pump technology dries at lower temperatures for gentle fabric care and because moisture is condensed, no venting is required. This is an ideal dryer for laundries where venting is difficult as it can be placed almost anywhere in the home.

Auto-Sensing Technology
Auto-sensing technology measures moisture inside the drum, shutting off at the perfect time to avoid over-drying your clothes, helping them last longer and reducing energy wastage.

8 Star Energy Rating

This dryer uses heat pump technology to gently and effectively dry clothes at low temperatures, and achieves an outstanding 8 star energy rating

Too Precious To Tumble?
The drying rack is designed for items that can't be tumble dried. It fits easily into the dryer and delivers the perfect result for those precious delicates, shoes and toys.

Designed To Match
The Heat Pump Condensing Dryer is designed to match beautifully with any Fisher & Paykel front loader washing machine, creating the perfect pair to deliver complete fabric care.

Where applicable:

All appliances use energy, and energy usage typically generates carbon emissions. Fisher & Paykel Appliances' In-use Energy Carbon Emissions Estimate indicates carbon emissions from a product's in-use energy. This is calculated either annually or per cycle, using the product's market-specific energy label energy consumption data multiplied by the carbon emissions factor for energy in your country or region.

Our In-use Energy Carbon Emissions Estimate is designed to assist customers in making informed purchasing decisions when comparing different Fisher & Paykel products. For example, a heat pump dryer typically has a lower In-use Energy Carbon Emissions Estimate than a vented dryer.
