2 Safety and warnings

Installation

**WARNING!**

**Electrical Shock Hazard**

Always disconnect the appliance from the mains power supply before carrying out any maintenance or repairs. Connection to a good earth wiring system is essential and mandatory. Alterations to the domestic wiring system must only be made by a qualified electrician.

Failure to follow this advice may result in death or electrical shock.

**WARNING!**

**Fire Hazard**

Do not use adapters, reducers, or branching devices to connect this appliance to the mains power supply.

Failure to follow this advice may result in overheating, burning, or fire.

**WARNING!**

**Cut Hazard**

Take care - panel edges are sharp.

Failure to use caution could result in injury or cuts.

**Important safety instructions**

- To avoid hazard, follow these instructions carefully before installing or using this appliance.
- Please make this information available to the person installing the appliance - doing so could reduce your installation costs.
- This appliance must be installed and connected to the mains power supply only by a suitably qualified person according to these installation instructions and in compliance with any applicable local building and electricity regulations. Failure to install the appliance correctly could invalidate any warranty or liability claims.
Operation and maintenance

Your built-in oven has been carefully designed to operate safely during normal cooking procedures. Please keep the following guidelines in mind when you are using your oven:

### WARNING!

**Electrical Shock Hazard**
Disconnect the oven from the power supply before any cleaning or maintenance.

Failure to do so may result in death or electrical shock.

### WARNING!

**Hot Surface Hazard**
Accessible parts may become hot when this oven is in use.
To avoid burns and scalds, keep children away.
Do not touch hot surfaces inside the oven.
Use oven mitts or other protection when handling hot surfaces such as oven shelves or dishes.
Take care when opening the oven door.
Let hot air or steam escape before removing or replacing food.

Failure to follow this advice could result in burns and scalds.

**Important safety instructions**

- **Isolating switch:** make sure this oven is connected to a circuit which incorporates an isolating switch providing full disconnection from the power supply.
- **Household appliances are not intended to be played with by children.**
- **Children, or persons with a disability which limits their ability to use the appliance, should have a responsible person to instruct them in its use. The instructor should be satisfied that they can use the appliance without danger to themselves or their surroundings.**
- **Safe food handling:** leave food in the oven for as short a time as possible before and after cooking. This is to avoid contamination by organisms which may cause food poisoning. Take particular care during warmer weather.
- **Do not place aluminium foil, dishes, trays, water or ice on the oven floor during cooking as this will irreversibly damage the enamel.**
- **Do not stand on the door, or place heavy objects on it.**
- **Do not use harsh abrasive cleaners or sharp metal scrapers to clean the oven door glass since they scratch the surface, which may result in shattering of the glass.**
- **Do not use a steam cleaner to clean any part of the oven.**
- **Caution. Hot air can blow from under the control panel as part of the oven’s cooling system.**
- **Do not keep flammable substances in the oven.**
- **If the power supply cable is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.**

*All height measurements include mounted feet.
Before you install the oven, make sure that
- the cabinets and oven cavity are square and level, and are the required dimensions
- the installation will comply with all clearance requirements and applicable standards and regulations
- a suitable isolating switch providing full disconnection from the mains power supply is incorporated in the permanent wiring, mounted and positioned to comply with the local wiring rules and regulations. The isolating switch must be of an approved type and provide a 3 mm air gap contact separation in all poles (or in all active [phase] conductors if the local wiring rules allow for this variation of the requirements)
- the isolating switch will be easily accessible to the customer with the oven installed
- there is at least 1.5 m (and not more than 2 m) free length of power supply cable within the cavity for ease of installation and servicing
- the oven connection socket (if fitted) is outside the cavity if the oven is flush to the rear wall
- the oven will rest on a surface that can support its weight
- the height from the floor suits the customer
- you consult local building authorities and by-laws if in doubt regarding installation.

When you have installed the oven, make sure that
- the oven doors can open fully without obstruction
- the power supply cable does not touch any hot metal parts
- the isolating switch is easily accessible by the customer
- you complete the ‘Final checklist’ at the end of these installation instructions.

Unpacking the oven

- Remove all packaging and dispose of it responsibly. Recycle items that you can.
- When you remove the oven from the carton, place it onto wooden blocks or similar supports to prevent damaging the lower trim.

Important!
Please take extra care not to damage the lower trim of the oven. It is important for correct air circulation and allows the door to open and close without obstruction. The manufacturer does not accept any responsibility for damage resulting from incorrect installation.
- You may remove the feet but ensure that the oven does not sit on the lower trim.

Fig. 2 Correct and incorrect placement of lower trim
Connecting the oven to the mains power supply

**Important!**
- This oven must be connected to the mains power supply only by a suitably qualified person.
- This oven must be earthed.

Before connecting the oven to the mains power supply, check that:
- the domestic wiring system is suitable for the power drawn by the oven (as specified on the rating plate);
- the voltage corresponds to the value given on the rating plate;
- the power supply cable used is type H05RR-F or H05RN-F and has a cross-sectional area of 3 x 4 mm².

Securing the oven to the cabinetry

1. Position the oven in the prepared cavity.
   *Important!*
   *Do not lift the oven by the door handle.*

2. Open the oven doors fully.

3. Use the supplied screws to secure the oven to the cabinetry.
   *Important!*
   - *Do not over-tighten the screws.*
   - *Do not seal the oven into the cabinetry with silicone or glue. This makes future servicing difficult. Fisher & Paykel will not cover the costs of removing the oven, or of damage caused by this removal.*

*Fig. 3 Securing the oven to the cabinetry*
Final checklist

TO BE COMPLETED BY THE INSTALLER

☐ Make sure the oven is level and securely fitted to the cabinetry.
☐ Check the lower trim is still undamaged.
☐ Open the lower oven door slowly to its fully open position and check if there is adequate clearance between the bottom of the door and the lower trim. This is to ensure correct air circulation. Should the lower trim become damaged, straighten the trim and ensure the oven door opens fully without obstruction.
☐ Turn the power to the oven on. 0:00 will flash in the clock display.
☐ Advise the customer to set the clock and condition the oven, following the instructions under ‘First use’ in the user guide.

**To set the clock**

When first connected, or after a power failure, 0·0·0 and AUTO will flash in the display.

1. Press ![Timer icon](image).
2. Press ![Decrease icon](image) and ![Increase icon](image) until you have the correct time of day.
Before using your new oven, please:

1. Read this user guide, taking special note of the ‘Safety and warnings’ section.
2. Remove all accessories and packaging. Make sure you peel the protective film off all surfaces.
3. Set the clock. The oven will not work until the clock has been set.
   - See ‘Oven controls and setting the clock’ for instructions.
4. Condition the oven:
   - Slide in the shelves and grill tray as shown in Fig.6 below. Fit them between the metal wires of the side racks, with the safety stop notch down and at the back.
   - Make sure the side catalytic panels and sliding shelf supports are fitted too. See ‘Care and cleaning’ for instructions if they are not already fitted.
   - Heat the oven on maximum temperature for the times below (see ‘Using your oven’):
     - 60 minutes using **BAKE**
     - 30 minutes using **FAN FORCED**
     - 15 minutes using **GRILL**
   - There will be a distinctive smell during the conditioning. This is normal, but make sure your kitchen is well ventilated.
5. Once cooled, wipe out the oven with a damp cloth and mild detergent, and dry thoroughly.

![Shelf positions](image-url)

*Fig. 6 Correct position of shelves and grill tray*
To start cooking

1 Select the function.
   - The oven lights will come on.

2 Set the temperature.
   - The temperature indicator light will come on. It will go out when the oven has reached the set temperature.
   - The temperature indicator light may come on and go out again during cooking as the oven maintains the temperature.

![Fig. 7 Turning the function knob](image1)

![Fig. 8 Turning the temperature knob](image2)

When you have finished cooking

- Turn both the function and temperature knobs to the off (0) position.

If AUTO is flashing or steadily lit, press to return the oven to manual mode.

Notes:
- Set the temperature back to off (0) before changing functions during cooking.
- A cooling fan may automatically come on at different times during cooking and blow out warm air below the control panel. It may continue to run even after the oven has been turned off. This is normal.
**OVEN LAMP**

Only the oven light comes on. It remains on in all the functions.

**BAKE**

This is the traditional method of baking. It is best to bake on only one shelf at a time in this function. Ideal for large cakes and dishes that bake for several hours.

**GRILL**

Use with the oven door closed and the temperature set no higher than 225°C. For best results, use the topmost shelf position when you want quick browning (eg toast).

**DEFROST**

Only the oven fan comes on. Use with the temperature set to 0. The fan circulates air around the oven, speeding up the defrosting process by approximately 30%. Note: this function is not for cooking food.

**FAN FORCED**

Great for multi-shelf cooking. The consistent temperature ensures baking is well risen. Cookies are crisp on the outside and chewy in the middle, meat and poultry are deliciously browned and sizzling while remaining juicy and tender.

**FAN GRILL**

Use with the oven door closed and the temperature set no higher than 220°C. Ideal for roasting tender cuts of meat and poultry. Use the lower shelf positions for larger items eg a whole chicken.

**WARM**

Use this function to keep cooked food hot and to warm plates and serving dishes. To reheat food from cold, set the temperature to 150°C and reduce it to 70-100°C only when the food is piping hot. Note: this function is not for cooking food and the temperature cannot be set higher than 150°C.

**FAN BAKE**

Ideal for dishes like lasagne that need to brown on top and also single trays of small cakes or biscuits that bake in less than an hour.
**Important!**

_Safe food handling: leave food in the oven for as short a time as possible before and after cooking or defrosting. This is to avoid contamination by organisms which may cause food poisoning. Take particular care during warmer weather._

**Notes on baking:**
- Preheat the oven before baking.
- Do not place anything, including water or ice, on the oven floor.
- Remove the fat filter before baking.

**Notes on using the fat filter:**
- Use the fat filter only when roasting meat and poultry on FAN BAKE, FAN GRILL or FAN FORCED. It helps to keep your oven clean and reduces splatter and smoking.
- Clean the fat filter after every use. See ‘Care and cleaning’.
- Remove the fat filter before baking.

**Important!**

_If the fat filter is not cleaned after every use, the grease build-up will block and shorten the life of the fan element._

![Fig. 9 Fat filter](image-url)
Please note:
- The settings in the following charts are guidelines only. Follow the instructions in your recipe or on packaging and be prepared to adjust the oven settings and baking times to achieve the best possible results for you.
- Shelf positions are counted from the base up (1 is the lowest, 4 the highest).
- Arrange oven shelves before you turn the oven on, then preheat the oven to the required temperature (until the temperature indicator light goes out).
- Settings in **bold** indicate the **recommended** oven function.

**Baking chart**

The shelf positions recommended below use the flat oven shelf (not the step-down shelf) used either with or without sliding shelf supports.

** Use the flat shelf in position 1 and the step-down shelf in position 4.
You can use the timer at any time, even when the oven is not in use.

**Important!**
*The timer does NOT turn the oven off.*

**To set the timer**

1. Press \( \mathbf{0} \cdot \mathbf{0} \cdot \mathbf{0} \). \( \mathbf{0} \cdot \mathbf{0} \cdot \mathbf{0} \) will show and the \( \mathbf{c} \) symbol will start flashing.
2. Press \( \mathbf{\downarrow} \) and \( \mathbf{\uparrow} \) to set the time you want (up to 23 hours and 59 minutes, in 1-minute steps).
   - After a few seconds, the clock will show the time of day with the \( \mathbf{c} \) symbol steadily lit. The timer is now counting down.

**To check the remaining time**

Press \( \mathbf{0} \cdot \mathbf{0} \cdot \mathbf{0} \).

**To cancel the timer**

1. Press \( \mathbf{0} \cdot \mathbf{0} \cdot \mathbf{0} \).
2. Press \( \mathbf{\downarrow} \) until the time is reset to \( \mathbf{0} \cdot \mathbf{0} \cdot \mathbf{0} \).
   - After a few seconds, the clock will show the time of day.

**When the set time is up**

- The timer will beep and the \( \mathbf{c} \) symbol will flash. Press \( \mathbf{0} \cdot \mathbf{0} \cdot \mathbf{0} \) to stop the beeping and turn the timer off.
- After a few seconds, the clock will show the time of day.

**To adjust the beep volume**

Press \( \mathbf{\downarrow} \) to hear the next volume level. The last one selected will be stored.
Important!

- Only the upper oven can be set for automatic cooking.

To set the oven for automatic cooking

1. Set the oven:
   - Check the clock shows the correct time (eg 12:07).
   - Select the function and set the temperature.
     The oven will turn on.

2. Set the cooking time:
   - Decide how long the food will take to cook, allowing time for preheating if necessary (eg 40 minutes).
   - Press \( \text{ } \).
   - Use \( \downarrow \text{ and } \uparrow \) to set the cooking time. AUTO will show in the display.

3. Set the stop time:
   - Decide when you want your food to be ready by (eg 13:30).
   - Press \( \text{ STOP } \).
   - Use \( \downarrow \text{ and } \uparrow \) to set the stop time.

You can turn the oven on manually and set it to turn off automatically by setting the stop time (step 3 above).

When automatic cooking is set

- If there is time before cooking starts, the oven will turn off and the current time of day and AUTO will show in the clock display, indicating that the oven is set for automatic cooking. Note: the cooling fan may stay on.
- The oven will automatically turn on at the required time (eg 12:50) and turn off at the set stop time (eg 13:30).
- To see the remaining cooking time, press \( \text{ } \).
- To see the set stop time, press \( \text{ STOP } \).
- To cancel automatic cooking, press \( \text{ } \) and turn the function and temperature knobs to 0 (off).

When the stop time is reached

- The oven will turn off, the timer will beep and AUTO will flash.
  1. Press \( \text{ } \) to stop the beeping and return the oven to manual mode.
  2. Turn the function and temperature knobs to 0 (off).
## Important!

- **Always disconnect the oven from the power supply before any cleaning or maintenance.**
  - When you switch the power back on after cleaning, you will have to set the clock.
- **Do not use abrasive cleaners, cloths or pads to clean any part of your oven. Some nylon scourers may also scratch. Check the label.**
- **See the following pages for instructions on removing and refitting different parts of the oven for cleaning.**
- **Before cleaning, make sure the oven is a safe temperature to touch.**
- **Do not use a steam cleaner.**

## Care and cleaning

### What? How? Important!

| Side catalytic panels | ▪ If you roast or grill a lot of meat and hardly ever bake, heating an empty oven for 60-90 mins at 250°C on BAKE from time to time will help the panels to break down any greasy soiling.  
▪ To remove large food particles: gently wash the panels in warm soapy water. Rinse in clean water and allow to dry naturally.  
▪ If the panels become oversaturated, they will appear shiny and their ability to ‘self-clean’ will be reduced. In this event, they can be reversed. |
|---|---|
| ▪ These panels are normally ‘self-cleaning’ because their special enamel breaks down greasy splatters when the oven is used for ‘non-greasy’ baking, especially at high temperatures.  
▪ Never use scourers, brushes, abrasives or cleaners with acid or alkali content on the catalytic panels. |

<table>

</tr>
</thead>
<tbody>
<tr>
<td>Do not wash these in the dishwasher, immerse in soapy water, or use oven cleaner on them as doing so will remove the white lubricating grease and prevent the slides from running smoothly.</td>

| Fat filter | ▪ If lightly soiled: wash in dishwasher (normal cycle).  
▪ If heavily soiled:  
1. Place under water in a pan.  
2. Add two tablespoons of clothes washing powder.  
3. Bring to the boil.  
4. Leave to soak for 30 minutes.

Removing and refitting the side racks and catalytic panels

When refitting the side racks, make sure they are the right way up, as in the illustrations.

When refitting the catalytic panels, make sure that:

- the arrows are pointing upwards
- the panel with the hole is on the left oven wall.

Note: the back of the oven is also a catalytic panel, but this is not reversible and should not be removed.

**Drop-down grill element**

Once you have removed the side racks, the grill element drops down (Fig. 13). The grill element itself is self-cleaning.
Care and cleaning

Removing and refitting the sliding shelf supports

*Important!*
Remove the side racks first to make removing the sliding shelf supports easier. When refitting the sliding shelf supports, make sure that you fit:

- the side racks first
- the slides to the top wire of a shelf position. They do not fit on the lower wire
- both sides of each pair of slides
- both slides on the same level.

Note:
- You cannot fit the slides to the topmost shelf position.

*Take care, the oven door is heavy!*

To remove the door

1. Open the door fully.
2. Open the levers.
3. Hold the door.
4. Close the door until the levers hook to it.
5. Disengage the hinges and remove the door.

To refit the door

Repeat these steps in reverse order.
Replacing the oven lamp

Note: oven bulb replacement is not covered by your warranty.

1 Let the oven cavity and the grill element cool down.

2 **Important!**  
*Disconnect the oven from the power supply before continuing.*

**LEFT LAMP (Fig.16)**

3a Remove the left side rack and catalytic panel. See ‘Removing and refitting the side racks and catalytic panels’.

4a Press down on the lamp cover and rotate to remove.

**Important!**  
*Never use screwdrivers or other utensils to remove the lamp cover, as doing so could damage the surrounding enamel. Only use your hands.*

5a Unscrew and replace the bulb with a new one suitable for high temperatures (300°C) with the following specifications: 230-240V, 50Hz, E14 and same wattage as the bulb being replaced (check wattage stamped on the bulb).

6a Refit the lamp cover, operating in reverse order. Make sure that it clicks into place.

**Important!**  
*The notch in the inner edge of the cover must be on the side closer to the back of the oven.*

7a Refit the left side rack and the left catalytic panel.

8a Switch the power to the oven back on.

**TOP RIGHT LAMP (Fig.16)**

3b Twist the lamp cover off.
