Thank you for purchasing a Haier Product.
Please read these instructions carefully before using this appliance. The instructions con-
tain important information which will help you get the best out of the appliance and ensure
safe and proper installation, use and maintenance.
Keep this manual in a convenient place so you can always refer to it for the safe and proper
use of the appliance.
If you sell the appliance, give it away, or leave it behind when you move house, make sure
you also pass this manual so that the new owner can become familiar with the appliance
and safety warnings.

Disposal
Help protect the environment and human health. Put the packaging
in applicable containers to recycle it. Help to recycle waste of electri-
cal and electronic appliances. Do not dispose appliances marked with
this symbol with the household waste. Return the product to your lo-
cal recycling facility or contact your municipal office.

Extreme care must be taken when disposing of your old appliance to avoid hazards:
- The flammable refrigerant gas must be safely removed.
- The thermal insulation foam in this appliance contains flammable insulation blowing
gases, any exposed foam may be highly flammable and must be carefully treated during
disposal.
- The doors and panels should be removed and the shelves left in place so that children
may not easily climb inside.

WARNING!
Risk of injury or suffocation!
Refrigerants and gases must be disposed of professionally. Ensure that the tubing of
the refrigerant circuit is not damaged before being properly disposed of. Disconnect
the appliance from the mains supply. Cut off the mains cable and dispose of it. Remove
the trays and drawers as well as the door catch and seals, to prevent children and pets to
get closed in the appliance.
Before switching on the appliance for the first time read the following safety hints:

**WARNING!**

**Before first use**
- Make sure there is no transport damage.
- Remove all packaging and keep out of children’s reach.
- Wait at least two hours before installing the appliance in order to ensure the refrigerant circuit is fully efficient.
- Handle the appliance always with at least two persons because it is heavy.

**Installation**
- The appliance should be placed in a well-ventilated place. Ensure a space of at least 2.5 cm above and 5 cm around the appliance.
- Never place the appliance in a damp area or location where it might be splashed with water. Clean and dry water splashes and stains with a soft clean cloth.
- Do not install the appliance in direct sunlight or in the near of heat sources (e.g. stoves, heaters).
- Install and level the appliance in an area suitable for its size and use.
- Keep ventilation openings in the appliance or in the in-built structure clear of obstruction.
- Make sure that the electrical information on the rating plate agrees with the power supply. If it does not, contact an electrician.
- The appliance is operated by a 220–240 VAC/50 Hz power supply. Abnormal voltage fluctuation may cause the appliance to fail to start, or damage to the temperature control or compressor, or there may be an abnormal noise when operating. In such case, an automatic regulator shall be mounted.
Safety

**WARNING!**

- Use a separate earthed socket for the power supply which is easy accessible. The appliance must be earthed.
- Do not use multi-plug adapters and extension cables.
- Ensure that the power cable is not trapped by the refrigerator. Do not step on the power cable.
- Do not damage the refrigerant circuit.

**Daily use**

- This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved.
- Keep away children under 3 years of age from the appliance unless they are constantly supervised.
- Children shall not play with the appliance.
- Children should be supervised to ensure that they do not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision.
- If cool gas or other inflammable gas is leaking in the vicinity of the appliance, turn off the valve of the leaking gas, open the doors and windows and do not unplug a plug in the power cable of the refrigerator or any other appliance.
- Notice that the appliance is set for operation at a specific ambient range between 10 and 43°C. The appliance may not work properly if it is left for a long period at a temperature above or below the indicated range.
- Do not place unstable articles (heavy objects, containers filled with water) on top of the refrigerator, to avoid personal injury caused by falling or electric shock caused by contact with water.
- Do not pull on the door shelves. The door may be pulled slant, the bottle rack, may be pulled away, or the appliance may topple.

**WARNING!**

- Open and close the doors only with the handles. The gap between the doors and between the doors and the cabinet is very narrow. Do not extend your hands in these areas to avoid pinching your fingers. Open or close the refrigerator doors only when there are no children standing within the range of door movement.
- Do not store or use inflammable, explosive or corrosive materials in the appliance or in the vicinity.
- Do not store explosive substances such aerosol cans with a flammable propellant in this appliance.
- Do not store medicines, bacteria or chemical agents in the appliance. This appliance is a household appliance. It is not recommended to store materials that require strict temperatures.
- Never store liquids in bottles or cans (besides high percentage spirits) especially carbonated beverages in the freezer, as these will burst during freezing.
- Check the condition of food if a warming in the freezer has taken place.
- Do not set unnecessarily low temperature in the refrigerator compartment. Minus temperatures may occur at high settings. Attention: Bottles can burst.
- Do not touch frozen goods with wet hands (wear gloves). Especially do not eat ice lollies immediately after removal from the freezer compartment. There is the risk to freeze or the formation of frost blisters. FIRST aid: keep immediately under running cold water. Do not pull away!
- Do not touch the inside surface of the freezer storage compartment when in operation, especially with wet hands, as your hands may freeze onto the surface.
- Unplug the appliance in the event of a power interruption or before cleaning. Allow at least 5 minutes before restarting the appliance, as frequent starting may damage the compressor.
- Do not use electrical devices inside the food storage compartments of the appliance, unless they are of the type recommended by the manufacturer.
Safety

Intended use

This appliance is intended for cooling and freezing food. It has been designed exclusively for use in household and similar applications such as staff kitchen areas in shops, offices and other working environments; farm houses and by clients in hotels, motels and other residential type environments as well as in bed-and-breakfast and catering business. It is not intended for commercial or industrial use. Changes or modifications to the device are not allowed. Unintended use may cause hazards and loss of warranty claims.

Maintenance / cleaning

- Make sure children are supervised if they carry out cleaning and maintenance.
- Disconnect the appliance from the electrical supply before undertaking any routine maintenance. Allow at least 5 minutes before restarting the appliance, as frequent starting may damage the compressor.
- Hold the plug, not the cable, when unplugging the appliance.
- Do not scrape off frost and ice with sharp objects. Do not use sprays, electric heaters like heater, hair dryer, steam cleaners or other sources of heat in order to avoid damage to the plastic parts.
- Do not use mechanical devices or other means to accelerate the defrosting process, other than those recommended by the manufacturer.
- If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.
- Do not try to repair, disassemble or modify the appliance by yourself. In case of repair please contact our customer service.
- Eliminate the dust on the back of the unit at least once in the year to avoid hazard by fire, as well as increased energy consumption.
- Do not spray or flush the appliance during cleaning.
- Do not use water spray or steam to clean the appliance.
- Do not clean the cold glass shelves with hot water. Sudden temperature change may cause the glass to break.

WARNING!

Maintenance / cleaning

Refrigerant gas information

- Make sure the refrigerant circuit is not damaged during transportation or installation. Leaking refrigerant may cause eye injuries or ignite. If a damage has occurred, keep away open fire sources, thoroughly ventilate the room, do not plug or unplug the power cords of the appliance or any other appliance. Inform the customer service.
- In case of eyes get into contact with the refrigerant, rinse immediately it under running water and call immediately the eye specialist.

In Queensland - the authorized Service Person MUST hold a Gas Work Authorisation for hydrocarbon refrigerants, to carry out Servicing or repairs which involve the removal of covers.

This refrigerator may contain the flammable refrigerant ISOBUTANE (R600a). Make sure the refrigerant circuit is not damaged during transportation or installation. Leaking refrigerant may cause eye injuries or ignite. If a damage has occurred, keep away open fire sources, thoroughly ventilate the room, do not plug or unplug the power cords of the appliance or any other appliance. Inform the customer service.

In Queensland - the authorized Service Person MUST hold a Gas Work Authorisation for hydrocarbon refrigerants, to carry out Servicing or repairs which involve the removal of covers.

Intended use

This appliance is intended for cooling and freezing food. It has been designed exclusively for use in household and similar applications such as staff kitchen areas in shops, offices and other working environments; farm houses and by clients in hotels, motels and other residential type environments as well as in bed-and-breakfast and catering business. It is not intended for commercial or industrial use. Changes or modifications to the device are not allowed. Unintended use may cause hazards and loss of warranty claims.
Product description

Due to technical changes and different models, the illustrations in this chapter may differ from your model.

Use

Before first use
- Remove all packaging materials, keep them out of children’s reach and dispose of them in an environmentally friendly manner.
- Clean the inside and outside of the appliance with water and a mild detergent before putting any food in it.
- After the appliance has been levelled and cleaned, wait for at least 2 hours before connecting it to the power supply. See Section INSTALLATION.
- Precool the compartments at high settings before loading with food. The function Power Cool and Power Freeze helps to cool down the compartments quickly.

Control panel

Buttons:
A Refrigerator selector
B Freezer selector
C “SMART” mode and “holiday” function selector
D “Power Cool” selector
E “Power Freeze” selector
F Panel lock selector

Indicators:
a Temperature Refrigerator
b Temperature Freezer
c1 “holiday” mode
c2 “SMART” mode
d “Power Cool” function
e “Power Freeze” function
f Panel lock

Sensor keys
The buttons on the control panel are sensor keys, which already respond when lightly touched with the finger.
Switch on/of the appliance

The appliance is in operation as soon as it is connected to the power supply.
When the appliance is powered on for the first time, freezer temperature is shining on the display “b” until the temperature reaches -5°C or after 1 hour working. The temperatures displayed will show the actual temperatures in the compartment.

Maybe the panel lock is active.
Empty the appliance before switching off. To switch off the appliance, pull the power cord out of the power socket.

Notice
When the appliance is switched on after disconnection from the main power supply, it may take up to 12 hours for the correct temperatures to be reached.

Lock/unlock panel

The control panel is automatically blocked against activation if 30 seconds no button is pressed. For any settings the control panel must be unlocked.

- Touch button “F” for 3 seconds to block all panel elements against activation. An acoustic signal sounds. The related indicator “f” is now displayed and the lightening of the panel is switched off. The icon flashes if a button will be pressed, when the panel lock is activated. The change is not running.
- For unlocking press again the button.

Standby-mode

The display screen turns off automatically 30 seconds after pressing a key or if one of the doors is open longer than 30 seconds. The display will be automatically locked. It lights up automatically when pressing any key or opening one of the doors.

Door opening alarm

When one door is opened for more than 3 minutes, the door opening alarm will sound. The alarm can be silenced by closing the door. If the door is left open for more than 7 minutes, the light inside the compartment will automatically switch off.

Select the working mode

You may need to select one of the following two ways to set the appliance:

1) SMART mode

Under SMART mode, the appliance can automatically adjust the temperature setting according to the ambient temperature and temperature change in the appliance. If you do not have any special requirements, we recommend that you use SMART mode (refer to SMART FUNCTION).

2) Manual adjusting mode:

If you want to manually adjust the temperature of the appliance in order to store a particular food, you can set the temperature via a temperature adjusting button (refer to ADJUST THE TEMPERATURE).

Adjust the temperature

The indoor temperatures are influenced by the following factors:

- Ambient temperature
- Frequency of door opening
- Amount of stored foods
- Installation of the appliance

Adjust the temperature for fridge

1. Unlock the panel by pressing button “F” if it is locked.
2. Press button “A” (Refrigerator) to select the refrigerator compartment. The actual temperature in the refrigerator compartment is displayed.
3. Press button “A” (Refrigerator) to set the refrigerator temperature. A signal will sound at each key press. The temperature increases in sequences of 1°C from a minimum of 1°C to a maximum of 9°C. The optimum temperature in the refrigerator is 5 °C. Colder temperatures mean unnecessary energy consumption.
4. Press any key except “A” (Refrigerator) to confirm, or the setting confirms automatically after 5 seconds. Displayed temperature stops flashing.

Adjust the temperature for freezer

1. Unlock the panel by pressing button “F” if it is locked.
2. Press button “B” (Freezer) to select the freezer compartment. The actual temperature in the freezer compartment is displayed.
3. Press button "B" (Freezer) to set the freezer temperature. A signal will sound at each key press. The temperature increases in sequences of 1°C from -14°C to -24°C. The optimum temperature in the freezer is -18°C. Colder temperatures mean unnecessary energy consumption.

4. Press any key except "B" (Freezer) to confirm, or the setting confirms automatically after 5 seconds. Displayed temperature stops flashing.

**Notice**

The temperature cannot be adjusted, if any other function (Power Cool, Power Freeze, holiday or SMART) is activated or the display is locked. The corresponding indicator will flash accompanying with a buzzer.

### SMART function

In the SMART function, the appliance can automatically adjust the temperature setting according to the ambient temperature and temperature change in the appliance. This function is totally hand free.

1. Unlock the panel by pressing button “F” if it is locked.
2. Press button “C” (SMART).
3. Indicator “c2” illuminates and the function is activated.

By repeating the above steps or selecting another function this function can be switched off again.

### Holiday function

This function sets the refrigerator temperature permanently to 17°C. This allows to keep the door of the empty refrigerator closed without causing an odour or mold - during a long absence (e.g. during holiday). The freezer compartment is free for your setting.

1. Unlock the panel by pressing button “F” if it is locked.
2. Press button “C” (SMART) for 3 seconds.

3. Indicator “c1” illuminates and the function is activated.

By repeating the above steps or selecting another function this function can be switched off again.

### WARNING!

During the holiday function no goods must be stored in the refrigerator compartment. The temperature of +17°C is too high for storing food.

### Power Cool function

Switch on the Power Cool function if larger quantity of food should be stored (for example after the purchase). The Power-Cool function accelerates the cooling of fresh food and protects the goods already stored from undesirable warming. The factory setting temperature is 0 to +1°C.

1. Unlock the panel by pressing button “F” if it is locked.
2. Press button “D” (Power Cool).
3. Indicator “d” illuminates and the function is activated.

By repeating the above steps or selecting another function this function can be switched off again.

### Notice

This function will be automatically disabled after 3 hours.
**Power Freeze function**

Fresh food should be frozen as quickly as possible to the core. This preserved the best nutritional value, appearance and taste. The Power Freeze function accelerates the freezing of fresh food and protects the goods already stored from undesirable warming. If you need to freeze a large amount of food once, it is recommended to set the Power Freeze function on ahead for 24h before the usage of frozen room. The factory setting temperature is -24 °C.

1. Unlock the panel by pressing button “F” if it is locked.
2. Press button “E” (Power Freeze).
3. Indicator “e” illuminates and the function is activated.

By repeating the above steps or selecting an other function this function can be switched off again.

**Notice**

The Power Freeze function will automatically switch off after 50 hours. The appliance is then operated at the previously set temperature.

**Energy saving tips**

- Make sure the appliance is properly ventilated (see INSTALLATION).
- Do not install the appliance in direct sunlight or in the near of heat sources (e.g., stoves, heaters).
- Avoid unnecessarily low temperature in the appliance. The energy consumption increases the lower the temperature in the appliance is set.
- Functions like POWER COOL or POWER FREEZE consume more energy.
- Allow warm food to cool down before placing it in the appliance.
- Open the appliance door as little and as briefly as possible.
- Do not overfill the appliance to avoid obstructing the air flow.
- Avoid air within the food packaging.
- Keep door seals clean so that the door always closes correctly.
- Defreeze frozen food in the fridge storage compartment.

**Tips on storing fresh food**

### Storing into the refrigerator compartment

- Keep your fridge temperature below 5°C.
- Hot food must be cooled to room temperature before storing in the appliance.
- Foods stored in the refrigerator should be washed and dried before storing.
- Food to be stored should be properly sealed to avoid odour or taste alterations.
- Do not store excessive quantities of food. Leave spaces between foods to allow cold air flowing around them, for a better and more homogeneous cooling.
- Foods eaten daily should be stored at the front of the shelf.
- Leave a gap between foods and the inner walls, allowing air flowing. In special way don’t store foods against the rear wall: foods could freeze against rear wall. Avoid direct contact of food (especially oily or acidic food) with the inner liner, as oil/acid can erode the inner liner. Clean away oily/acid dirt whenever it is found.
- Defreeze frozen food in the fridge storage compartment. This way, you can use the frozen food to decrease the temperature in the compartment and save energy.
- The ageing process of fruit and vegetables such as courgettes, melons, papaya, banana, pineapple, etc. can be accelerated in the refrigerator. Therefore, it is not advisable to store them in the refrigerator. However, the ripening of strongly green fruits can be promoted for a certain period. Onions, garlic, ginger and other root vegetables should also be stored at room temperature.
- Unpleasant odours inside the fridge are a sign that something has spilled and cleaning is required. See CARE AND CLEANING.
- Different foods should be placed in different areas according to their properties:

1. Butter, cheese, etc.
2. Eggs, cans, canned food, spices, etc.
3. Drinks and bottled foods.
4. Pickled foods, canned food, etc.
5. Meat products, snack foods, etc.
6. Pasta, canned food, milk, tofu, dairy etc.
7. Cooked meat, sausages, etc.
8. Cooked meat, sausages, etc.
9. Fruits, vegetables, salad, etc.
Storage into the freezer compartment

- Keep the freezer temperature at -18°C.
- 24 hours before freezing switch on the POWER FREEZE function; for small quantities of food 4-6 hours are sufficient.
- Hot food must be cooled to room temperature before storing in the freezer compartment.
- Food cut into small portions will freeze faster and be easier to defrost and cook. The recommended weight for each portion is less than 2.5 kg.
- It is better to pack food before putting it into the freezer. The outside of the packaging must be dry to avoid bags sticking together. Packaging materials should be odour-free, airtight, non-poisonous and nontoxic.
- In order to avoid expiration of storage periods, please note the freezing date, time limit and name of the food on the packaging according to the storage periods of different foods.

**WARNING!**: Acid, alkali and salt etc. could erode the internal surface of the freezer. Do not place the food having these substances (e.g. sea fish) directly on the internal surface. Salt water in the freezer should be cleaned up immediately.

- Do not exceed the food storage times recommended by the manufacturers. Only take the required amount of food out of the freezer.
- Different foods should be placed in different areas according to their properties:

1. Less weighty items, such as ice cream, vegetables, bread etc.
2. Large/heavier portions of food, such as meats joints for roasting
3. Beverage without high alcohol and temporary storage of spirits with a high alcohol content, small parts like Pizza or herbs.

**Notice**

- Please keep the distance more than 10 mm between the food placed and the sensor to ensure the cooling effect.
- Please keep the lowest drawer when the appliance working in order to ensure the cooling effect.
- The food with ice (like ice cream etc.) should be stored inside the freezer compartment instead of on the bottle holder, for the temperature changes at bottle holder caused by door opening and closing may thaw the food.

- Consume defrosted food quickly. Defrosted food cannot be re-frozen unless it is first cooked, otherwise it may bless edible.
- Do not load excessive quantities of fresh food in the freezer compartment. Refer to the freezing capacity of the freezer – See TECHNICAL DATA or data at the type plate.
- Food can be stored in the freezer at a temperature of at least -18°C for 2 to 12 months, depending on its properties (e.g., meat: 3-12 months, vegetables: 6-12 months)
- When freezing fresh food, avoid bringing it in contact with already frozen food. Risk of thawing!
- Defreeze frozen food in the fridge. This way, you can use the frozen food to decrease the temperature in the compartment and save energy.

When storing commercially frozen foods, please follow these guidelines:

- Always follow manufacturers’ guidelines for the length of time you should store food for. Do not exceed these guidelines!
- Try to keep the length of time between purchase and storage as short as possible to preserve food quality.
- Buy frozen foods, which have been stored at a temperature of –18 °C or below.
- Avoid buying food which has ice or frost on the packaging – This indicates that the products might have been partially defrosted and refrozen at some point – temperature rises affect the quality of food.
Adjustable shelves
The height of the shelves can be adjusted to fit your storage needs.
1. To relocate a shelf, remove it first by uplifting its hind edge (1) and pulling it out (2).
2. To reinstall it, put it on the lugs on both sides and push it to the most rearward position until the rear of the shelf is fixed inside the slots in the sides.

Notice:
Ensure that all ends of a shelf are level.

Removable door racks/bottle holder
The door racks/bottle holder can be removed for cleaning:
1. Place hands on each side of the rack/holder and lift it upwards (1).
2. Pull the door rack/bottle holder out (2).
3. In order to insert the door rack/bottle holder, the above steps are carried out in reverse order.

Bottle holder- freezer compartment
The bottle holders of the freezer compartment are intended for temporary storage of spirits with a high alcohol content. Beverage without high alcohol should be cooled in the refrigerator. Additionally you can store small parts in the bottle holders.

WARNING!
Bottles and cans may burst! Set a timer that will remind you to remove bottles/cans without high alcohol content..

Removable drawer
To remove the drawer out of the refrigerator or freezer compartment open them to the maximum extent, lift and remove them.
In order to insert the drawer, the above steps are carried out in reverse order.

Notice:
When the appliance is switched on, it may take up to 12 hours for the correct temperatures to be reached.

Ice cube tray
1. Fill the ice cube tray 3/4 full of water and put it into one of the freezer storage drawer.
2. Twist the ice cube tray slightly or hold it under flowing water to loosen the ice cubes.

The Light
The LED interior light comes on when the door is opened. The performance of the lights is not affected by any of the appliances other settings.
Care and cleaning

Cleaning

Clean the appliance when only little or no food is stored. The appliance should be cleaned every four weeks for good maintenance and to prevent bad stored food odors.

**WARNING!**
- Do not clean the appliance with hard brushes, wire brushes, detergent powder, petrol, amyl acetate, acetone and similar organic solutions, acid or alkaline solutions. Please clean with special refrigerator detergent to avoid damage.
- Do not spray or flush the appliance during cleaning.
- Do not use water spray or steam to clean the appliance.
- Do not clean the cold glass shelves with hot water. Sudden temperature change may cause the glass to break.
- Do not touch the inside surface of the freezer storage compartment, especially with wet hands, as your hands may freeze onto the surface.
- In case of heating check the condition of frozen goods.

**WARNING!**

- Always keep the door gasket clean.
- Clean the inside and housing of the appliance with a sponge dampened in warm water and neutral detergent.
- Rinse and dry with soft cloth.
- Do not clean any of the parts of the appliance in a dishwasher.
- Allow at least 5 minutes before restarting the appliance as frequent starting may damage the compressor.

Defrosting

The defrosting of the refrigerator and the freezer compartment are done automatically; no manual operation is needed.

Replacing the LED-lamps

**WARNING!**

- Do not replace the LED lamp yourself, it must only be replaced by either the manufacturer or the authorised service agent.

The lamps adopts LED as its light source, featuring low energy consumption and long service life. If there is any abnormality, please contact the customer service. See CUSTOMER SERVICE.

Parameters of the lamps: 12 V max 5 W.

Non-use for a longer period

If the appliance is not used for an extended period of time, and you will not use the Holiday-function for the refrigerator:

- Take out the food.
- Unplug the power cord.
- Clean the appliance as described above.
- Keep the doors open to prevent the creation of bad odours inside.

Notice

Turn the appliance off only if strictly necessary.

Moving the appliance

1. Remove all food and unplug the appliance.
2. Secure shelves and other moveable parts in the fridge and the freezer with adhesive tape.
3. Do not tilt the refrigerator more than 45° to avoid damaging the refrigerating system.

**WARNING!**

- Do not lift the appliance by its handles.
- Never place the appliance horizontally on the ground.
Many occurring problems could be solved by yourself without specific expertise. In case of a problem please check all shown possibilities and follow below instructions before you contact an after sales service. See CUSTOMER SERVICE.

### WARNING!
- Before maintenance, deactivate the appliance and disconnect the mains plug from the mains socket.
- Electrical equipment should be serviced only by qualified electrical experts, because improper repairs can cause considerable consequential damages.
- A damaged supply should only be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

<table>

- A door of the appliance is not tightly closed.  
- The door has been opened too frequently or for too long.  
- The door gasket is dirty, worn, cracked or mismatched.  
- Something on the inside prevents the door to close properly.  
| **It is too cold inside the appliance.** | - The temperature is set too low.  
- The Power Freeze/Power Cool function is activated or is running too long.  
- Make sure that the appliance is not overloaded.  
- Disconnect the power supply.  
- Increase the temperature.  
- Close the door.  
- This is normal in damp climate and will change when the humidity decreases.  
- Ensure that the door is tightly shut.  
- The appliances were not adequately packaged.  
- A door of the appliance is not tightly closed.  
- The door has been opened too frequently or for too long.

</thead>
<tbody>
<tr>
<td>The appliance makes abnormal sounds.</td>
<td>• The appliance is not located on level ground.</td>
<td>• Adjust the feet to level the appliance.</td>
</tr>
<tr>
<td></td>
<td>• The appliance touches some object around it.</td>
<td>• Remove objects around the appliance.</td>
</tr>
<tr>
<td>A slight sound is to be heard similar to that of flowing water.</td>
<td>• -</td>
<td>• This is normal.</td>
</tr>
<tr>
<td>You will hear an alarm beep.</td>
<td>• The fridge storage compartment door is open.</td>
<td>• Close the door.</td>
</tr>
<tr>
<td>You will hear a faint hum.</td>
<td>• The anti-condensation system is working</td>
<td>• This prevents condensation and is normal</td>
</tr>
<tr>
<td>The interior lighting or cooling system does not work.</td>
<td>• Mains plug is not connected in the mains socket.</td>
<td>• Connect the mains plug.</td>
</tr>
<tr>
<td></td>
<td>• The power supply is not intact.</td>
<td>• Check the electrical supply to the room. Call the local electricity company!</td>
</tr>
<tr>
<td></td>
<td>• The LED-lamp is out of order.</td>
<td>• Please call the service for changing the lamp.</td>
</tr>

</table>

Power interruption

In the event of a power cut, food should remain safely cold for about 5 hours. Follow these tips during a prolonged power interruption, especially in summer:

- Open the door/drawer as few times as possible.
- Do not put additional food into the appliance during a power interruption.
- If prior notice of a power interruption is given and the interruption duration is longer than 5 hours, make some ice and put it in a container in the top of the refrigerator compartment.
- An inspection of the goods is required immediately after the interruption.
- As temperature in the refrigerator will rise during a power interruption or other failure, the storage period and edible quality of food will be reduced. Any food that defrosts should be either consumed, or cooked and refrozen (where suitable) soon afterwards in order to prevent health risks.

Memory function during power interruption

After restoration of power the appliance continues with the settings that were set before the power failure.

Unpacking

**WARNING!**

- The appliance is heavy. Always handle with at least two persons.
- Keep all packaging materials out of children’s reach and dispose them in an environmentally friendly manner.

- Take the appliance out of the packaging.
- Remove all packaging materials including the transparent protective film.

Environmental conditions

The room temperature should always be between 10° C and 43° C, since it can influence the temperature inside the appliance and its energy consumption. Do not install the appliance near other heat-emitting appliances (ovens, refrigerators) without isolation.

Do not place on the product on flooring covered with carpet, overly flexible, unstable or easily damaged by moisture.

Space requirement

Required space when door is opened:
- Appliance width: 161 cm
- Appliance depth: 112 cm

Ventilation cross-section

To achieve sufficient ventilation of the appliance for safety reasons, the information of the required ventilation cross sections must be observed.

Aligning the appliance

The appliance should be placed on a flat and solid surface.
1. Tilt the refrigerator slightly backwards.
2. Set the feet to the desired level.
Make sure the distance to the wall on the hinge sides is at least 5 cm.
Installation

3. The stability can be checked by alternately bumping on the diagonals. The slightly swaying should be the same in both directions. Otherwise the frame can warp; possible leaking door seals are the result. A low tendency to the rear facilitates the closing of the doors.

Fine tuning of the doors

If the doors are still not in one level after levelling the doors by the feet, this mismatch can be remedied by turning the hinge lifting shaft at the right bottom corner of refrigerating door with a spanner.

- Clockwise turn lifting shaft with spanner to lower door height.
- Anti-clockwise turn lifting shaft with spanner to lift door height.

Waiting time

To the maintenance-free lubrication oil is located in the capsule of the compressor. This oil can get through the closed pipe system during slanting transport. Before connecting the appliance to the power supply you have to wait at least 2 hours so that the oil runs back into the capsule.

Electrical connection

Before each connection check if:

- power supply, socket and fusing are appropriate to the rating plate.
- the power socket is earthed and no multi-plug or extension.
- the power plug and socket are strictly according.

Connect the plug to a properly installed household socket.

WARNING!

Do not adjust the hinge lifting shaft excessively to a height which might cause the shaft to leave its original locked position. (Adjustable height range: 3 mm)

WARNING!

To avoid risks a damaged power cord must be replaced by the customer service (see warranty card).
Removing and installing the doors

In the event that you need to remove the appliance doors, please follow the door removal and installation instructions below.

**WARNING!**

- Before any operation, deactivate the appliance and disconnect the mains plug from the mains socket.
- The appliance is heavy. Always handle with at least two persons.
- Do not tilt the appliance more than 45° or place it horizontally on the ground.

1. Undo the hinge cover screw and remove the cover. Release the cable connector.

2. Undo the screws holding the upper hinge in position and then remove the hinge.
3. Lift the freezer compartment door to remove it.

4. Refit the door by reversing the removal steps. Ensure that the grounding cable will be fixed by the screw.

Notice

The pictures show the removing of the freezer compartment door. For the refrigerator door please use the corresponding parts on the other site.
